

Advice for outdoor vegetables

General

Nxt Fertilizers has a positive impact on the solid growth of outdoor vegetables, like Brassicas, onions, carrots and beets. The Nxt Fertilizers formulas can be applied during and after planting and provides the plant with the right nutrients for a good root system, healthy stems and a good defence against diseases.

Nxt soil fertilizers provides the basic in the soil and creates the balance between the physical, biological and chemical compounds. During the season Nxt foliar fertilizers gives you the control of the growing crop to yield.

Nxt FertiVital is a fertilizer additive based on bacterial spores and trace elements. FertiVital can be applied together with the Nxt soil fertilizers or separate right under the plant roots. It ensures a strong crop and resistance to clubroot and other infections. Regular soil analysis are important for reliable advice!

Recommended formulas for soil treatments

Before, during or after planting

Depending of the amount of nitrogen and phosphorus per hectare, there are two soil-fertilizers with good practical experiences: 1) **N-xt NP 22-2 B S Zn**
2) **N-xt NP 18-6 B S Zn**

Together with planting or sowing the outdoor vegetables, there is a possibility to spray in the root domain; **N-xt FertiVital**.

After sowing there is treatment recommended for better quality, skin and internal structure.

Spraying with 7-hole nozzle of raindrop:

N-xt Calcium (N9 with Boron)

Recommended formulas during season

Start using N-xt foliar fertilizer directly after sufficient foliage has developed

For specific points of attention look at the foliar-leaflet!!

N-xt N18 Ca Mg Mn (first 2 times)

N-xt NPK 18-0-3 Mg B Zn (rest of season)

Gezonde bodem, vruchtbaar resultaat
